

Plan Now to Protect Tomorrow

Preventative Maintenance (PM) – What's It All About?

Kinsley Power Systems provides customized PM programs. Like any other equipment, your generator power system needs periodic maintenance to keep it in top condition and ready to operate when the lights go out. In the middle of a power failure is not the time to find out your backup power system has problems. Kinsley Power Systems offers PM Programs tailored to your needs.

These Programs Include:

- Regularly scheduled visits
- Multi-point inspections
- Fluid and filter changes
- Environmentally safe waste disposal
- Complete system testing
- Optional fluids analysis

The Kinsley Power Systems Advantage:

Our Superior Staff Offers:

- Kinsley has nearly 50 years in business
- The Most EGSA Certified Technicians of Any Generator Service Company
- The Most Comprehensive PM Programs Available
- Scheduled Inspections
- 24/7 Emergency Service
- Certified Waste Disposal
- Service coverage across the Northeast
- Extended Warranty Programs on KOHLER® equipment
- Load Bank Testing
- Ability to service many Switchgear brands
- Ability to service all Generator & Engine brands in the industry
 - Oil, Fuel and Coolant Analysis
 - \$5M Extended Liability Insurance
 - Fuel Cleaning & Filtering
 - Generator and ATS Rentals 20 to 2000kW
 - New Equipment Sales – Generator replacement or new construction

A consistent planned maintenance schedule will uncover, diagnose and correct minor problems before they become more costly and increase the likelihood of a failure. While planned maintenance is not a problem-free guarantee, the odds will be on your side.

Maintenance Options:

Annual PM

Kinsley Power Systems inspects all equipment via our multi-point inspection report.

We also:

- Change oil, oil filter and fuel filter.
- Test and treat coolant, as required.
- Dispose of waste oil and filters at an EPA Approved recycling facility.
- Replace air filter, if needed (additional fee).

We will make repairs as needed and approved by the customer.

Semi-Annual PM

You receive all services provided with Annual PM with an additional inspection performed in six months.

Quarterly PM

You receive all services provided with Annual PM with an additional inspection performed quarterly.

Monthly PM

You receive all services provided with Annual PM with an additional inspection performed monthly.

NOTE : Additional inspections do not include filter and fluid changes. Repairs are not included in the price of the maintenance programs. Repairs will be billed at prevailing rates for parts, labor and mileage, where applicable.

Load Bank Testing

You may never think about it until it's too late, but Load Bank Testing on a regular basis goes along way in saving you money. Here are the top reasons you should safeguard your system with Load Bank Testing by Kinsley Power Systems:

1. By actually drawing power from the generator, Load Banking tests your system's capability without interrupting standard utility services to your facility.
2. The test is the only sure way to tell if your system is capable of handling the load that is required of it.
3. The test expels moisture and cleans carbon deposits out of the exhaust system, combustion chambers and turbocharger(s).
4. Load bank testing can also help in situations where "wet stacking" is evident, by fully loading the engine. This test exercises your generator. Standard exercising, starting the unit and running the engine with no load transfer, only exercises the engine. Load Banking is the only true way to exercise the entire generator.
5. This test is required by law in accordance with the National Fire Protection Association Code 110 "Standard for Emergency and Standby Power System" where life safety electrical power needs are involved. Section 8.4.2.3 states, "Diesel-powered EPS installations that do not meet the requirements of 8. 4.2 shall be exercised monthly with the available EPSS load and exercised annually with supplemental loads at 25 percent of the nameplate rating for 30 minutes, followed by 50 percent of nameplate rating for 30 minutes, followed by 75 percent of the nameplate rating for 60 minutes, for a total of 2 continuous hours."

Let Us Help

Fast and efficient service is a well - known Kinsley Power Systems hallmark. All of our technicians are thoroughly trained professionals and our service vehicles are continuously restocked with parts. We have the highest number of EGSA certified technicians and are factory trained by several of the global engine suppliers to the emergency power equipment manufacturers. We don't limit ourselves to just the popular brand products - we repair ALL major generator and automatic transfer switch makes and models.

We provide service throughout all Northeastern States
