

## Remote Generator Monitoring

# Uptime is Everything

In a hyper-competitive market, the last thing a business needs to worry about during a power outage is whether or not their back-up generator is going to start. The first step in ensuring the reliability of your generator is to have a consistent and planned maintenance schedule. Regular Inspection of a generator will uncover, diagnose, and correct minor problems before they can become costly repairs. Your Kinsley Power Systems expert is your insurance policy against the unexpected. The second line of defense is installing an innovative remote monitoring solution.

### What is Remote Monitoring?

Remote Monitoring is a system that allows you to have access to your generator's settings without having to be on site. Monitoring a generator 24/7 increases the likelihood of detecting a minor problem before a critical failure occurs. Kinsley's generator monitoring solutions are ready to protect what's most important to you, keeping your business up and running during a power outage.

### How Remote Monitoring Works

Once installing the remote monitor on your generator(s), it will remain active 24/7, collecting data and alerting you instantly if there is a problem. If a problem arises, a Kinsley professional will immediately determine whether it can be fixed remotely or requires a service call. In the event a service call is necessary, your service technician will have the ability to review the data before arriving on-site. This review ensures that the technician has the correct parts and equipment to address the problem immediately. Many times, the failure of a generator is due to mechanical issues such as a dead battery, lack of fuel, or block heater failure.

The remote monitor will create an alert when common problems are detected. Some of these include:

- Low Battery Voltage
- Low coolant temperature
- Missed Exercise
- Low Fuel
- Unhandled Alarms

Once an alert is received, Kinsley Power Systems will jump into action to protect your investment.

## Remote Generator Monitoring

### ADVANTAGES OF REMOTE MONITORING

Please call your Kinsley Power Systems representative at 800-255-3503 to schedule a demonstration of our remote monitoring systems.
